MEDIA KIT

A **revolutionary** wellness device designed to ease injection pain and **empower** every step of your self-care journey.

digivibe™ by sūthe

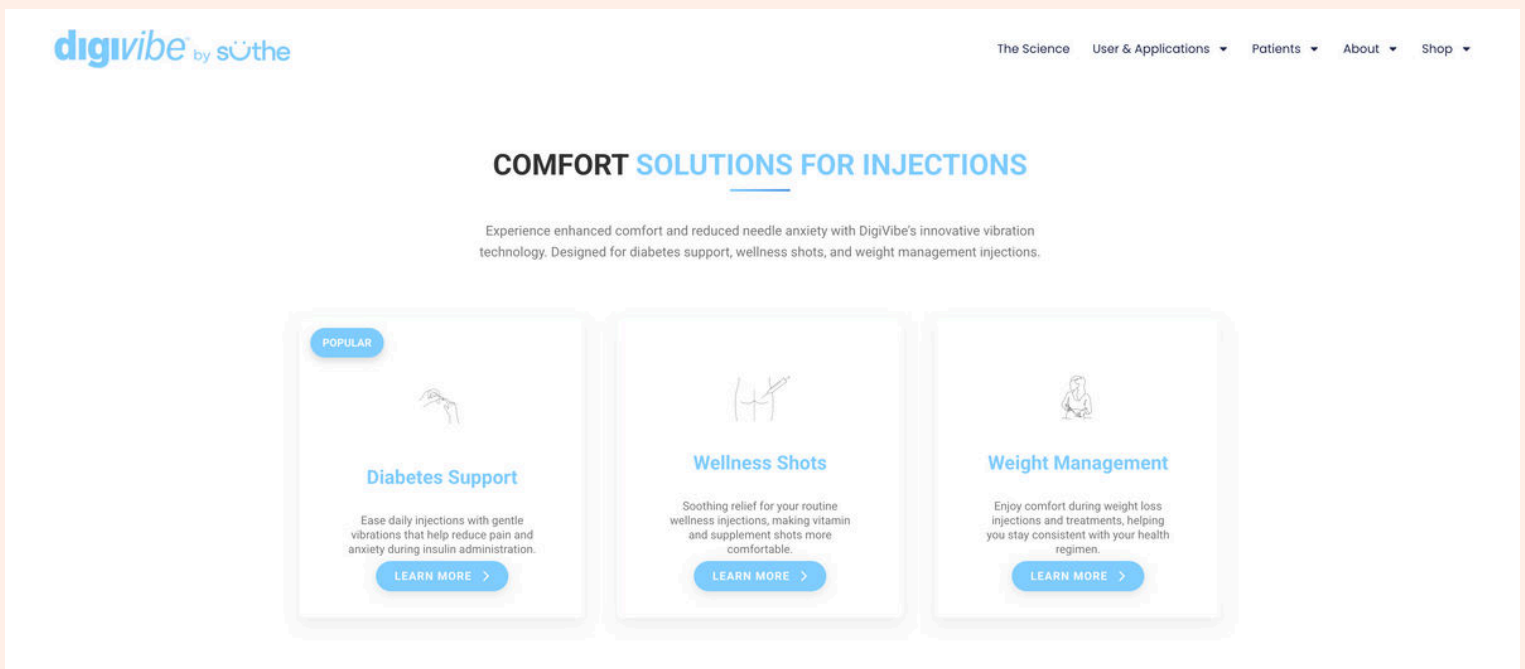

Digivibe™ by Suthe is a wellness-forward medical device designed to reduce the pain and anxiety associated with self-injection. Whether managing diabetes, undergoing weight-loss therapy, fertility treatments, or wellness injections like HGH or B12—Digivibe makes the experience easier, gentler, and more empowering.

Using clinically supported vibration technology based on the Gate Control Theory of Pain, Digivibe™ blocks pain signals at the source—making finger pricks and subcutaneous injections significantly more tolerable. Trusted by clinicians and embraced by patients, it's a simple tool with transformative impact.

Our mission is to redefine what injection care feels like by combining compassionate design with accessible innovation. We aim to help individuals—young or old, newly diagnosed or long managing—build confidence and consistency in their health routines. At SutheDermal, we believe that comfort isn't a luxury in wellness—it's the foundation of lasting care.

MEDIA KIT

OUR GOAL

At Suthe, our mission is simple: to bring comfort, confidence, and compassion to every person facing daily self-injections. We created Digivibe™ to ease pain, reduce anxiety, and empower patients of all ages to take control of their care—without fear. It's more than a device; it's a step toward better living."
